

Inngangur

Í 2. gr. reglugerðar nr. 301/1995 um eftirlit með sáðvöru, ásamt síðari breytingum, er opinber sáðvörulisti skilgreindur á eftirfarandi hátt: *Listi sem Matvælastofnun gefur út yfir skráða sáðvöru eftir að hafa leitað álits Sáðvöru- og áburðarnefndar. Matvælastofnun birtir listann á heimasíðu sinni auk þess að koma honum á framfæri innan EES-svæðisins. Einnig sér Matvælastofnun um að uppfæra listann eftir þörfum.*

Síðast var slíkur listi birtur árið 2009. Á íslenska sáðvörulistanum eru einkum þau yrki sem mikilvægt er fyrir íslenska ræktendur að hafa aðgang að og sem þarf að tryggja að séu inni á sameiginlegri skrá evrópska efnahagssvæðisins yfir yrki til landbúnaðar (sjá: [sameiginlega skrá EES](#)). Samkvæmt 3. gr. reglugerðar 301/1995 er heimilt að rækta og viðurkenna til sölu fræ af yrkjum á innlendum sáðvörulista og á þessari sameiginlegu skrá og sama gildir um innflutning á fræjum þessara yrkja sbr. 22. gr.

Landbúnaðarháskóli Íslands birtir árlega á heimasíðu sinni www.lbhi.is rit er ber heitið: „[Nytjaplöntur á Íslandi](#)“. Þar er að finna þau yrki helstu nytjajurta í landbúnaði sem mælt er með til ræktunar á Íslandi. Ekki er ástæða til að Sáðvörulisti Matvælastofnunar gegni því hlutverki heldur er mikilvægt að hann styðji við lista Landbúnaðarháskólans svo framleiðsla og markaðssetning fræja þeirra yrkja sé möguleg hér á landi.

Introduction

An Icelandic national catalogue of varieties of agricultural plant species has not been issued since 2009. This new edition has the main purpose to make possible the certification and marketing of varieties recommended for growing in Iceland. The Agricultural University of Iceland issues yearly a list of recommended varieties of agricultural plant species which is published on their homepage: www.lbhi.is with the current link: [List of recommended varieties 2011](#). A place in that list demonstrates their importance for cultivation and use under Icelandic conditions.

As part of the EEA agreement Iceland has implemented the seed legislation of the European Community so that seed of all varieties in the common catalogue of agricultural plant and vegetable species can be certified and marketed in Iceland. Therefore this national catalogue is mostly limited to recommended varieties which are considered valuable for cultivation and use in Iceland.
